# The Vestas' portfolio of wind solutions

From siting to aftersales, our offering spans across turbines and services

---

## Expertise

built from more than 35 years  
of wind industry experience

# The Vestas' 2 MW and 4 MW platforms

Mature platforms with proven track records

---

**2MW**  
**PLATFORM**

- Introduced in 2000 and incrementally improved over the years
- + 20,500 units installed globally\*
- Well suited for sites with infrastructure constraints

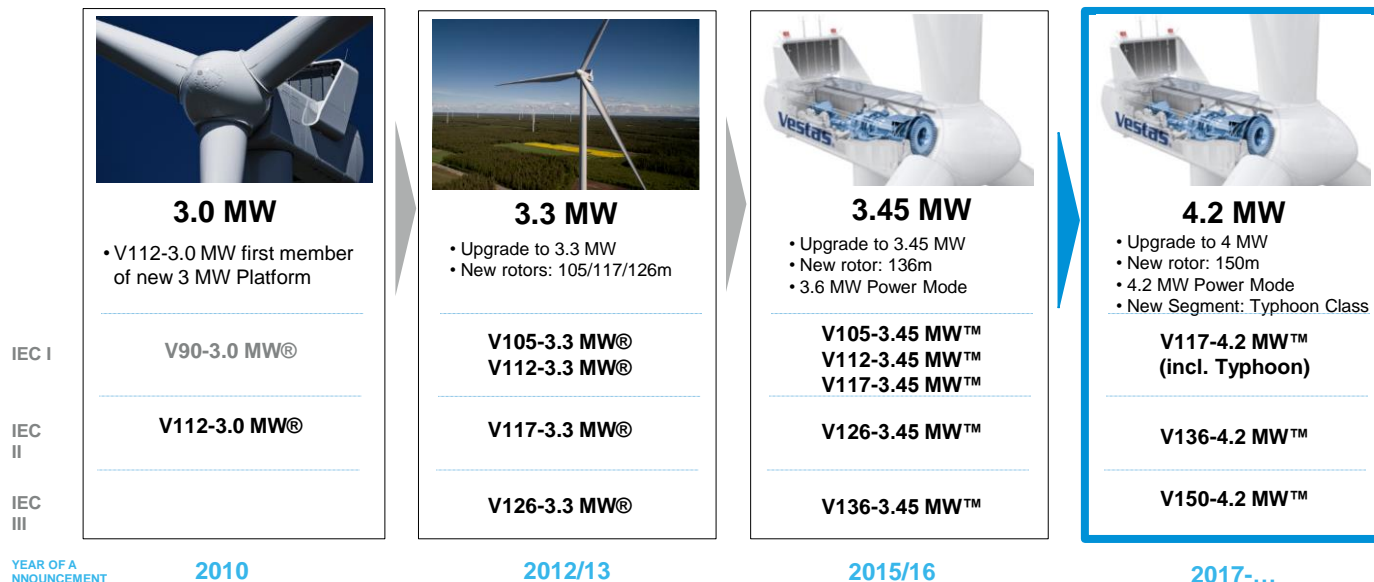

**4MW**  
**PLATFORM**

- Introduced in 2010, now fourth generation
- + 5,500 units installed globally\*
- Grid compliant across the world due to full converter solution

\* As of 31 March 2018

# 4 MW: Next step in the evolution of a proven platform

Significant AEP increase driving down Cost of Energy

***Vestas***<sup>®</sup>

# 4 MW Platform

**Wind.** It means the world to us.<sup>™</sup>

# Vestas 4 MW Platform Portfolio

One common platform, powering 8 turbine variants for broad wind spectrum coverage

## WINDCLASSES – IEC

■ Standard IEC conditions\* ■ Site dependent\*

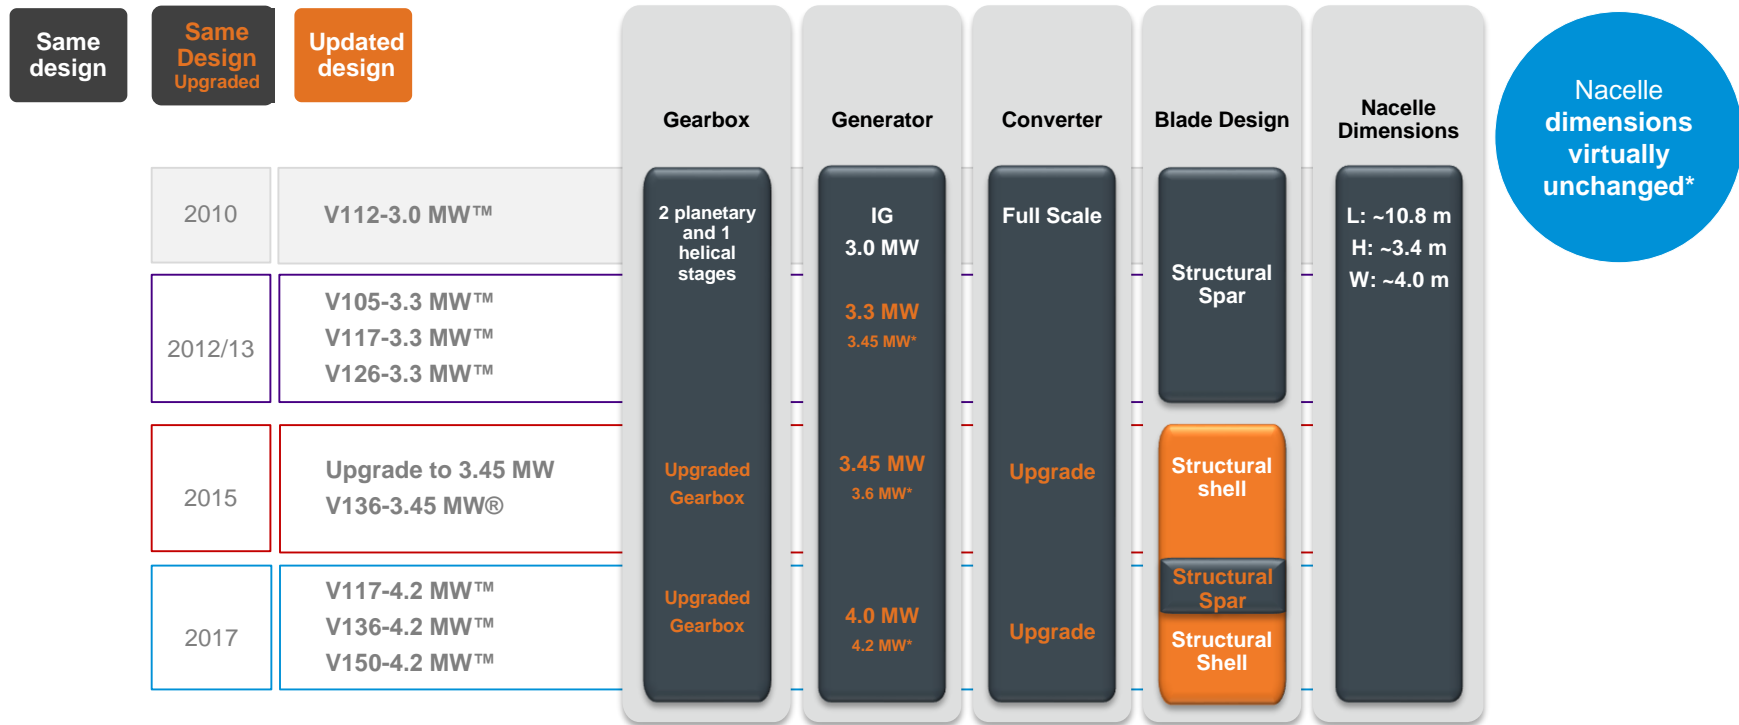

TURBINE TYPE	IEC III (6.0 – 7.5 m/s)	IEC II (7.5 – 8.5 m/s)	IEC I (8.5 – 10.0 m/s)	Above 10.0 m/s
<b>4 MW TURBINES</b>				
V105-3.45 MW™ IEC IA Power Optimised Mode up to 3.6 MW			■	■
V112-3.45 MW® IEC IA Power Optimised Mode up to 3.6 MW			■	■
V117-3.45 MW® IEC IB/IEC IIA Power Optimised Mode up to 3.6 MW		■	■	■
V117-4.2 MW™ IEC IB/IEC IIA/IEC S/IEC T 4.2 MW Power Optimised Mode		■	■	■
V126-3.45 MW™ IEC IIB/IEC IIA Power Optimised Mode up to 3.6 MW		■	■	
V136-3.45 MW™ IEC IIB/IEC IIIA Power Optimised Mode up to 3.6 MW	■	■	■	
V136-4.2 MW™ IEC IIB/IEC S 4.2 MW Power Optimised Mode	■	■	■	
V150-4.2 MW™ IEC IIIB/IEC S 4.2 MW Power Optimised Mode	■	■		

\*Based on nominal rating

# Platform Evolution

Incremental step-wise performance upgrades

\*Power Optimised Mode

***Vestas***<sup>®</sup>

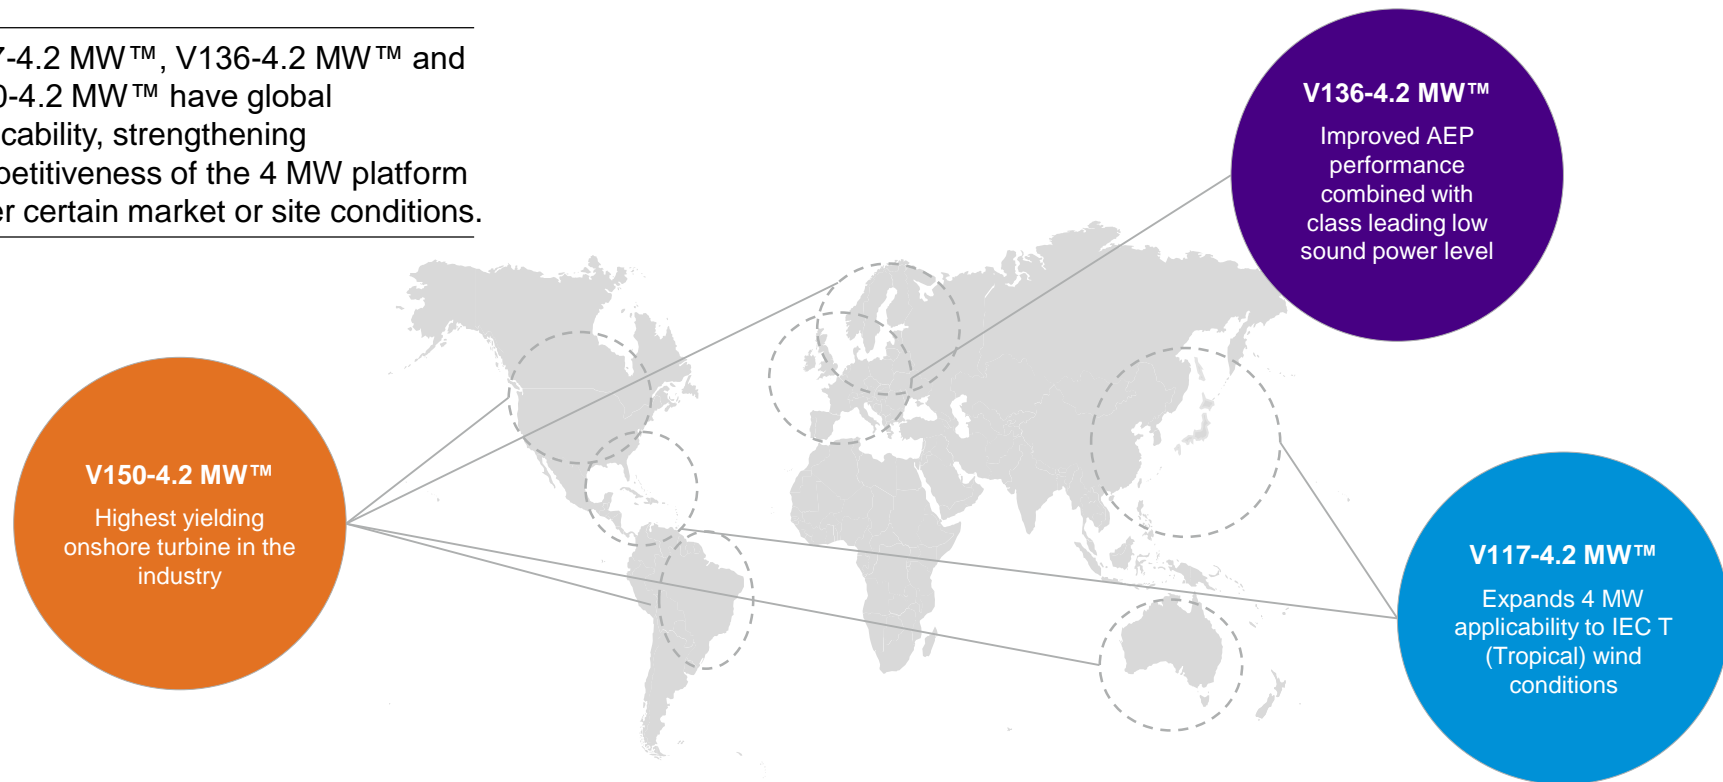

4 MW platform provides  
**industry-leading** track record  
and performance

**Wind.** It means the world to us.<sup>™</sup>

# Strengthened market coverage

V117-4.2 MW™, V136-4.2 MW™ and V150-4.2 MW™

V117-4.2 MW™, V136-4.2 MW™ and V150-4.2 MW™ have global applicability, strengthening competitiveness of the 4 MW platform under certain market or site conditions.

# Global Product

4 MW turbine variants, installed in various sites and market conditions across 6 continents

**Operational data**, generated every 10 minutes from more than **3,000 turbine sites\*** across the globe, providing valuable insights for Vestas' engineers to **fine-tune performance** - in unrelenting pursuit of **lower cost of energy**.

South Korea

\* All Vestas turbines, not specific to 4 MW

\*\* As of 31 March 2018

# Platform Installation Track Record

The 4 MW platform is proven, already performing in volumes across the world

\* As of 31 March 2018

# Advantage of evolutionary approach: steady performance

Continued reliable performance across Vestas-serviced fleet

While the number of Vestas installed turbines increase, **fleet Lost Production Factor (LPF) has stabilised at a very low level.** This is the result of the Vestas evolutionary product development approach

**Lost Production  
Factor (LPF)**  
Percent

Includes 2 MW variants,  
4 MW variants, and legacy  
turbines under Vestas service

# Latest Performance Upgrades

**Wind.** It means the world to us.<sup>™</sup>

# Latest Performance Upgrades

New variants enabled by strengthened platform components

For V117-4.2 MW™, V136-4.2 MW™ and V150-4.2 MW™, the 4 MW platform has been strengthened through **upgrades to existing proven component and systems.**

## More Torque

- Upgraded gearbox, same proven design. Powering V136-4.2 MW™ and V150-4.2 MW™
- Application of known gearbox in V117-4.2 MW™

## Upgraded Blades & Hub

- Vestas most advanced blade design & advanced materials applied to 73.7 m blades (V150-4.2 MW™)
- Strengthened 57.2 m (V117-4.2 MW™) blade
- Enforced blade bearings & pitch capacity (V150-4.2 MW™)

## 4.0 MW nominal rating

- Upgrade to proven generator and transformer system
- Upgraded water cooling & Cooler Top™
- 4.2 MW Power Optimised Mode

## Upgraded Converter

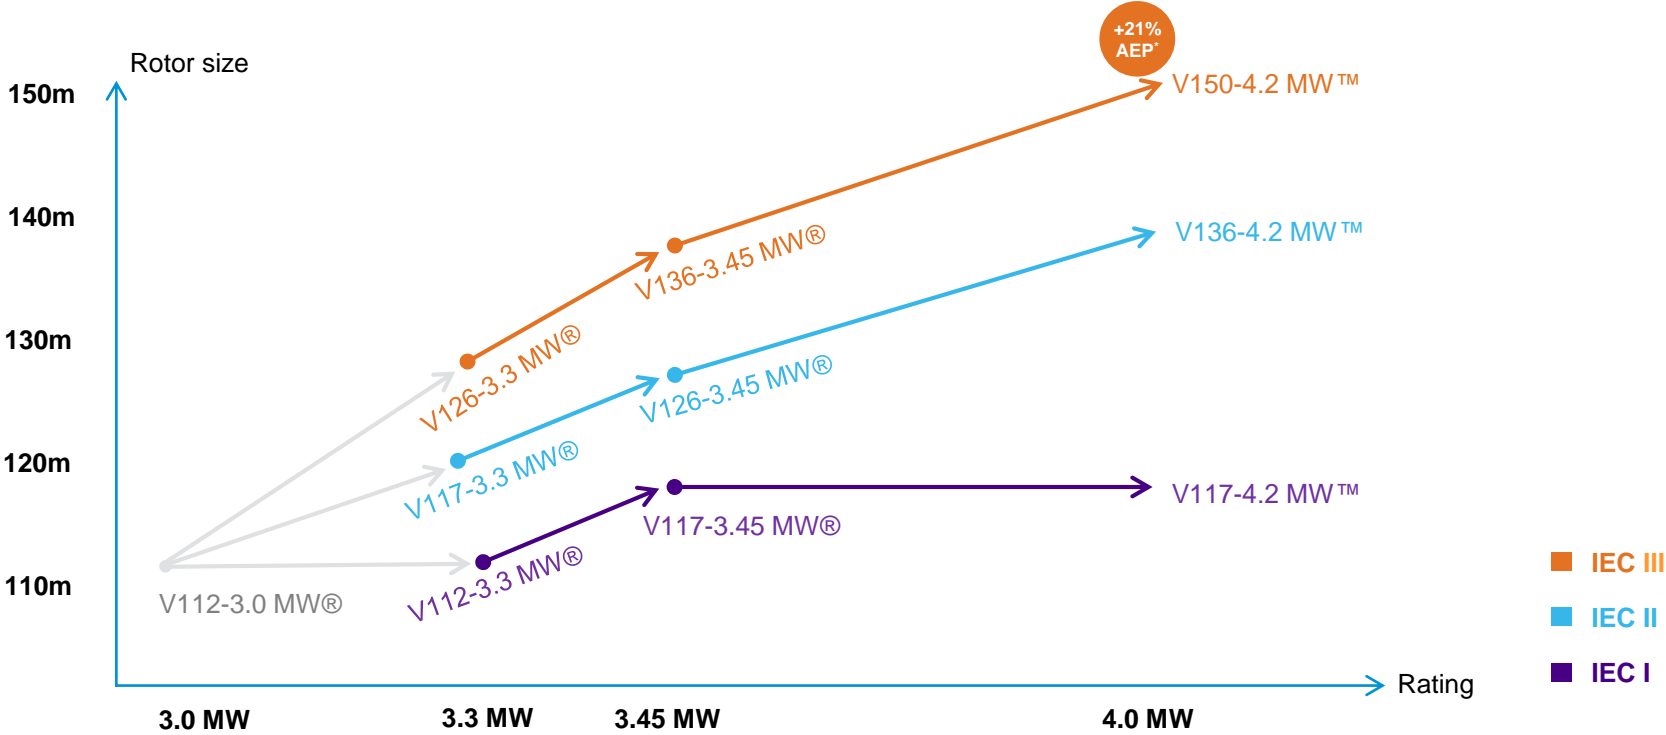

- Upgraded full-scale converter, leveraging modularized design

# Increased Annual Energy Production

Latest upgrade enables double-digit AEP gains in all standard wind classes

\*AEP=Annual Energy Production. V150-4.2 MW™ with 4.2 MW Power Optimised Mode in IEC III Compared to V136-3.45 MW™ Actual figures depend on site specific conditions.

# V150-4.2 MW™ turbine variant

Highest yielding onshore turbine in the industry

Segment  
leading  
Energy  
Production

Up to 241 m  
tip height

## Larger Swept Area

Blade length increased to 73.7 m using Vestas most advanced aerofoil design and materials

17,671 m<sup>2</sup>  
swept area

+22%  
swept area\*

## Higher Energy Production

Combined with increase in capacity factor

Up to  
21%  
AEP Increase\*

## Reduced Sound Power Levels

Segment leading energy production combined with very low 104.9 dB(A)

Maximum  
104.9  
dB(A)

## Tower Portfolio

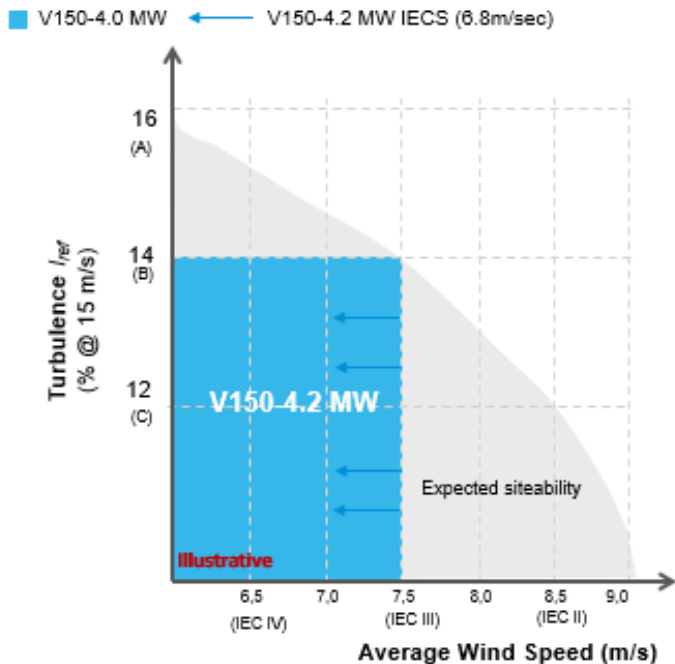

- Site specific tower portfolio to meet tip heights ranging from 180-241 meter leveraging industry leading 166 m hub height

\*Compared to V136-3.45 MW. Depending on wind condition

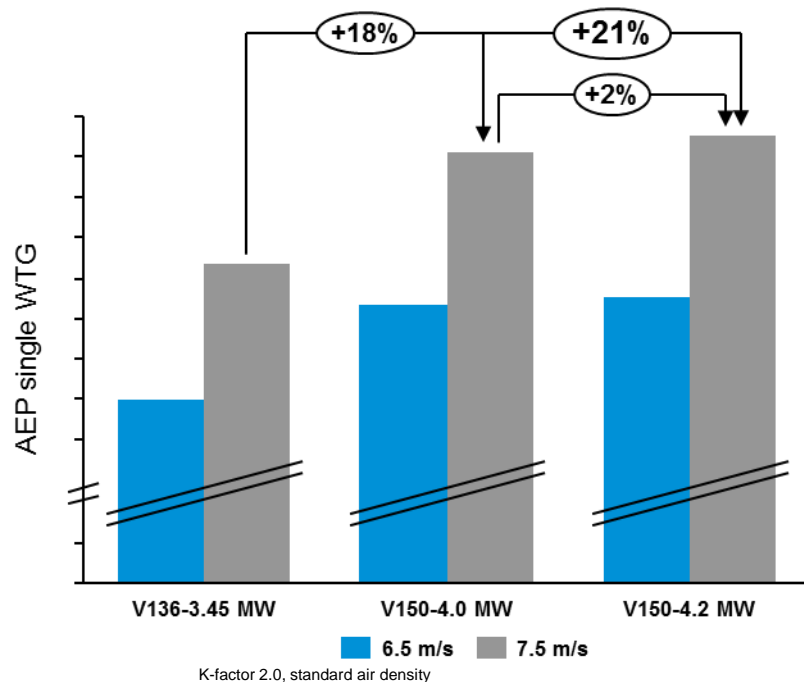

# V150-4.2 MW™ offering

Operating strategy for maximizing siting capability and power performance

## Application Space

## Energy Production

# Vestas track record

## Really proven performance – deliver what we promised

Vestas has asked third party to review our performance in operational fleet

### UL cover page to Vestas Fleet Performance Document

Daniel W. Bernadett, P.E. – AWS Truepower, a UL Company

Harald Mellinghoff – DEWI, a UL Company

Confidentiality: To be distributed at the discretion of Vestas

Date: 30 December 2017

UL was contracted by Vestas to review the document they developed entitled "Vestas Fleet Performance" [Document number 0071-1372 V00] [the Document]. UL has reviewed the Document and confirms that we understand and agree with the calculation methodology used to create this summary, and that we have been able to conduct spot checks of the original reports upon which the summarized results are based. These reports cover projects beginning in 2003 and were conducted by ISO 17025 accredited laboratories following IEC 61400-12-1, Edition 1. These spot checks verify that the results are a fair, accurate, and comprehensive representation of the power curve data held by Vestas.

UL staff [Bernadett and Mellinghoff] reviewed the database used to develop the Document. During three days of on-site review in Vestas offices in Aarhus [7-9 November 2017], Bernadett and Mellinghoff were provided with a draft of the Document, an Excel-based, tabular, numeric summary of the randomized and anonymized data used to create the Document, and visual access to the PDF reports from the Independent Engineer (IE) that completed the IEC compliant power performance tests that make up the database. The Vestas power curve database presents a convincing body of evidence to support the claim that Vestas has demonstrated their capability to predict the power performance of their turbines with a satisfactory degree of accuracy. In particular, the measured curves were found to consistently agree with published curves. This agreement can give confidence that the performance of new turbine models are likely to meet the expectations set by the published curves.

Signed,

# Grid compliance

## Grid compliance for both plant and turbines

### Grid Compliance

- The grid performance for the V150-4.0/4.2 MW will be similar to the V136-3.45 MW with 3.6 MW Power Optimised Mode.

### Plant Compliance – Grid Stabilisation

- Synthetic inertia ie. Overboosting
- Frequency response
- Ramp-up requirement
- Fault ride through (up to 450 msec with 0.0 pu)

### Turbine Compliance

- Consumption (active/reactive power)
- Power quality conditions ie. Flicker and harmonics
- Temporary overvoltage (TOV)

# Calibrated turbine input ensures optimal production

Adaptive Wind Sensing and Wind Speed Estimator provides up to 0.6% more AEP\*

---

- Adaptive Wind Sensing and Wind Speed Estimator uses advanced algorithms to **calibrate upwind yaw position and more accurately measure wind speed** in front of the rotor. The increased accuracy results in more power and less loads.

\*Actual AEP (Annual Energy Production) depends on turbine type and site conditions

- **Adaptive Wind Sensing** continuously and automatically calibrates its upwind yaw positions, updating the wind correlation parameters for each individual wind turbine
  - The algorithm uses the natural variation in wind direction (+/- 6 degrees) to calculate optimum yaw position based on power production
  - The improved upwind yaw accuracy leads to improved operation, reduced loads, and enables accurate performance according to warranted power curves
- 
- **Wind Speed Estimator** reverses the measurement process by calculating the wind speed from the turbine's pitch, speed, and power readings
  - Also, it continuously and automatically corrects the wind correlation parameters for each individual wind turbine
  - The algorithm allows Vestas to more accurately measure the wind speed in front of the entire rotor, resulting in optimized operational settings
